

NoWallsMusic.com

NoWallsMusic.com - *Winter / Spring Rates for Small Bands & Artists as of January 2010*

Producer/Engineer: \$50/hr

Engineer duties includes basic tech package of microphones, recording system* - band/artist supplies working space and hardware eg: instruments, amps, mic stands, etc.

Producer duties includes band *idea management*, creation of song embellishments, studio musician coaching, pre-production and guidance during demo creation. Keyboard performance by producer on project is also included at this rate (accordion, Hammond organ, syths, etc.)

Specialty rates

If you have a recording facility and engineer already, rate is \$35 / hr - This rate is for those situations where you have already obtained recording gear and space, but need help making your work sound professional , and to give it the best creative edge you can. This rate does NOT include recording gear or engineering - that must be supplied by artist/band.

If you have a producer already, rate is \$35 / hr - This rate is for when you have all the creative work complete, and you just need someone to record your creation. This rate does not include any creative input from the engineer, beyond getting a good sound on track.

If you require just a session keyboard player rate of \$50 per studio tracking session (2 hour maximum time including rehearsal time) applies.

How time is billed: Working time (except "session musician" work) is measured in 15 minute intervals (rounded upward), and starts when the producer or engineer arrives. Working time stops when the producer leaves. The maximum continuous session time is 8 hours. **If required to continue the session past the 8 hour mark, TIME + 50% becomes the effective rate until end of session.** A rough estimate will be created for project budget at start of project, and a 50% retaining fee will be required to book first session. All account balances need to be cleared before final tracks are turned over to the band/artist.

* Recording is done on Apple Computers, running Logic 9.1, along with Melodyne DNA.
